

Cylinder with Turntable

MGT Series

ø63, ø80, ø100

Flat cylinder with guide (MGP series) and manual turntable combination

Cylinder with Turntable

MGT Series

∅63, ∅80, ∅100

Flat cylinder with guide (MGP series) and manual turntable combination
 High precision bearings for smooth turning return movement
 Table unit has positioning mechanisms for each 90° and 180° of rotation

Rotation position is detected by provision of an auto switch sensor

Can be mounted 3 ways

Application Example

Assembly lines, inspection lines etc. with turning operations

100	150, 175, 200

Intermediate strokes

Intermediate strokes (in 5 mm increments) other than the standard strokes are made by installing spacers of 5, 10, 15 and 20 mm widths.

(Ex.) 1.MGTM63-35ST is made by installing a 15 mm spacer inside a MGTM63-50ST, however the overall length will be the same as the 50ST.

Auto Switch Mounting

When mounting an auto switch, insert it into the cylinder's auto switch groove from the direction shown in the figure below. After setting it in the mounting position, use a flat head watchmaker's screwdriver to secure it with the auto switch mounting screw which is included.

Mounting of auto switches for cylinder

Mounting of auto switch for table position detection

Note) When fastening the auto switch mounting screw, use a watchmaker's screwdriver with a grip diameter of 5 to 6 mm. The fastening torque should be 0.05 to 0.1 N·m. As a rule, it should be turned about 90° past the position at which tightening can be felt.

Specific Product Precautions

Be sure to read this before handling the products.
Refer to page 8 for safety instructions and pages 9 to 18 for actuator and auto switch precautions.

Mounting

Warning

1. Do not put hands or fingers between the plate and body.

Care should be taken that hands or fingers do not get caught in the space between the cylinder body and the plate when air pressure is applied.

2. When rotating the turntable, take care that hands or fingers are not caught by the position detector auto switch bracket.

Because there is a danger of hands or fingers getting caught between the switch bracket and one of the magnet arms, please use caution when the turntable is being rotated.

Mounting

Caution

1. Do not scratch or dent the sliding parts of the piston rod and guide rods.
Damage to seals may cause air leaks or faulty operation.
2. In cases where the cylinder will be bottom mounted and shock will be delivered during use, the mounting bolts should be inserted to a depth of 2d or more.

3. If the cylinder is to be bottom mounted, bypass ports should be provided for the guide rods.

Since the guide rods protrude from the bottom of the cylinder at the end of the retracting stroke, in cases where the cylinder is to be bottom mounted it is necessary to provide by-pass ports for the guide rods in the mounting surface, as well as holes for the hexagon socket head screws which are used for mounting.
